

# Introducing

## SYNTAX *one*

### **SecurStore Online Backup Service**

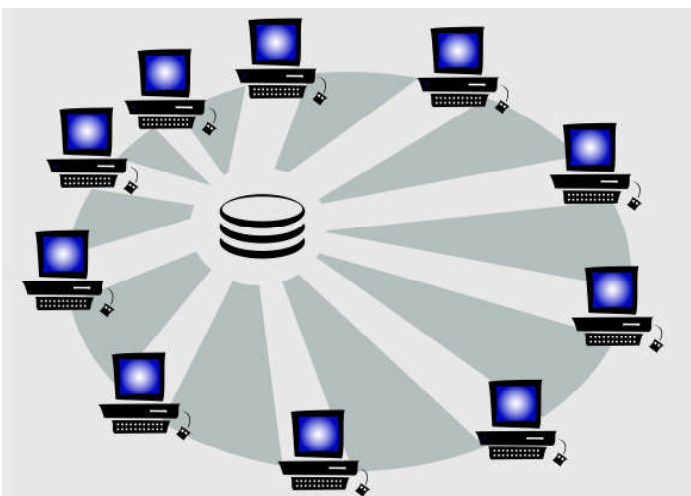

**SyntaxOne SecurStore Online Backup Service** is a business-class, secure backup and restore service for corporate data networks. It is a unique alternative to traditional backup methods, replacing conventional tape based systems with a fully automated online solution. It provides centralised and automated backups of PCs, file servers, application/database servers and remote laptops with secure off-site storage and immediate online recovery.

Data is backed up quickly and securely over the internet and is encrypted and compressed before it is transmitted to our data centre. Data is available online for **immediate and reliable recovery 24x7** from any location, thereby providing an effective business continuity and disaster recovery solution.

#### How it works

The customer decides the timing, frequency and the number of generations for each backup. Initially, the system takes a full backup of the selected data and after that only the changes at block level are backed up. The system then rebuilds a full master for each generation of data when recovery is needed. The solution is quick to install, agentless, and requires no additional software to be installed on computers to enable backup services.

#### SyntaxOne SecurStore features

- **Secure, fully automated solution**
- **Compressed data storage**
- **Rapid recovery**
- **Data available 24x7**
- **Archiving facility for data lifecycle management**

# Key Business Benefits

Online, off-site backup is now considered best practice for protecting business data, and **SyntaxOne SecurStore** provides a 100% reliable data backup and recovery service.

## Security

- Off-site Backup facility
- Backup data is replicated to an additional subsystem
- Provides a business continuity and disaster recovery solution
- Data is encrypted before transmission

## Speed of recovery

- Data can be restored 24x7 from any location
- Faster data recovery than tape backup
- Eliminates the risk of media error
- Rapid individual file/mail level restore

## Support

- Managed by experts using best practice guideline
- Wide application support including Microsoft Exchange, Lotus Notes, Oracle, SQL and DB2.
- Access to assistance 24x7
- Portal based access to data management

## Scalability

- Priced per gigabyte – pay as you grow
- Protect distributed data through one centralised location
- Backup of laptops from remote locations
